

Notes on the “Undo” command

You **CANNOT**

Undo sheet movements:

- Inserting / deleting sheets
- Moving sheets from one file to another
- Changing a sheet's position in the workbook

Undo after running a macro

Undo freeze panes (Alt, W, F, F)

Undo split worksheet (Alt, W, S)

Undo after tracing precedents or dependents of a cell (Alt, M, P or Alt, M, D) in the same sheet where the last change was made

You **CAN**

Undo a change in cell number format but you **cannot** undo format merge (Alt, H, J, M)

www.f1f9.com

Undo outlining (Grouping) but you **cannot undo the change in outlining settings (Alt, A, L)**

Undo worksheet zoom level

The maximum number of levels for the Undo command is 100.

While you can increase or decrease the number of Undo levels in Excel by making some changes in the Windows Registry Editor, Microsoft recommends that you do not increase the undo levels beyond 100 as this may adversely affect Excel's performance.
